DO CELLULAR PHONES CAUSE MORE VEHICLE ACCIDENTS?

The short answer: YES! It is common knowledge that the number one cause of work-related fatalities is vehicle accidents. Most organizations have at least one truck, if not a whole fleet of vehicles, and their drivers face the hazards of the roadway day after day. Sometimes a trip ends tragically.

In more and more organizations, cellular phones are being used by public works, police, administration, and management as the primary means of communication between workers/departments. According to one research study, the use of a cellular phone while driving increases the risk of having an accident four-fold. Another study found that having a cellular phone in a vehicle increased the risk of being involved in an accident by 34 %. The U.S. Department of Transportation reports an increase in the number of complaints about drivers talking on their cellular phones while operating a vehicle.

Reported Hazards Associated With Cellular Phones:

- Users are said to be distracted from defensive driving practices, and less responsive to highway traffic situations. When they do react, their response time is said to be longer.
- People on the phone are more likely to have intense conversations that involve problem-solving-which is more distracting than shooting the breeze with a passenger.
- Passengers in the car often alert drivers to dangerous situation, and stop talking at such times, in contrast to someone on the other end of the line who is unaware of the traffic situation.
- Cell phone users may be concentrating on dialing a number or handling the equipment and fail to notice a stop light, traffic sign, or a vehicle in front of them.
- Not only the driver on the phone, but other drivers on the roadway are at increased risk if a cell phone user is the ultimate cause of an accident.

Safety Reminders For Cell Phone Users:

- Don't use the cell phone for social visiting.
- Hang up in tricky traffic situations-without warning if necessary. Safe driving takes precedence over telephone etiquette. You can explain later-- because you'll still be alive!
- Resist dialing a number while on the move in heavy traffic whenever possible; wait until you are at a traffic light or stop sign.
- Keep even *more* distance between you and the car ahead of you than normally recommended.
- Consider using a "hands-free" speakerphone system, so you can keep your hands on the wheel and your eyes on the road-- and still keep talking. These speakerphones are available for many popular telephone models. Some states have proposed legislation that requires use of these devices.

All drivers are at risk of having a vehicle accident before, during or after work, and the use of a cell phone may increase this risk. *Concentrate* on the above reminders! Do not become a statistic!
