

Surfacing Saucon Rail Trail

Prior to the opening of the Saucon Rail Trail a combined team of Public Works staff from the Township and Borough utilized Township paving equipment to lay down a surface on the Lower Saucon and Hellertown portions of the trail. The two municipalities put down several inches of recycled crushed concrete which was rolled and compacted. The hard surface has received excellent reviews from the hundreds of walkers, runners and bicyclists who have been using the trail since its opening in May.
